

Gapar Galym

Backend Developer

gapargalym@mail.ru | Almaty / Astana, Kazakhstan
GitHub | Telegram | Instagram

SUMMARY

Software Engineering student focused on backend development and practical applications. Interested in API design, system logic, and building simple but meaningful products. Disciplined, responsible, and fast-learning, with strong interest in software structure and real-world development.

TECHNICAL SKILLS

Languages: Go, JavaScript (Node.js), Python, Java, C++

Backend: REST API, Express.js, backend fundamentals

Databases: MongoDB, PostgreSQL

Tools: Git, Docker, Linux

Frontend: HTML5, CSS3, EJS

KEY PROJECTS

Reflex App

Node.js, Express, MongoDB, EJS

- Developed a journaling and self-analysis web application with user authentication.
- Implemented CRUD operations for personal entries with filters, tags, and text search.
- Built an insights module to identify user behavior patterns based on mood and activity.
- Designed a minimal and structured interface focused on usability.

Zombie Arena (2D Game)

Java

- Developed a 2D survival game with wave-based mechanics and multiple weapon types.
- Implemented player movement, enemy spawning, and gameplay interaction logic.
- Applied object-oriented programming principles to structure the game system.

School-178 Project

HTML, CSS, JavaScript

- Developed a prototype website concept for a school cafeteria ordering system.
- Proposed a pre-order workflow to reduce queue time during school breaks.
- Presented the project at a city-level competition and achieved 2nd place.

EDUCATION

Astana IT University (AITU)

BSc in Software Engineering, 2nd Year

Astana, Kazakhstan

LANGUAGES

Russian: Native

English: B2–C1

Kazakh: Native / Fluent

ADDITIONAL INFORMATION

- Strong discipline, responsibility, and adaptability.
- Good ability to learn new tools and concepts quickly.
- Experience in teamwork and basic coordination.
- Personal interests: guitar, gym training, self-development.
